234405	Software Engineering	Bsc.(H) Computer Sc.	40

AnsNo	Answer
1	<p>The prototyping methods in the software process are:</p> <p>Evolutionary prototyping: In this method of system development, the initial prototype is arranged, and it is then precise through the number of phases to the final stage.</p> <p>Throw-away prototyping: Using this method, a rough practical implementation of the system is produced. The requirement issues can be identified from this implementation. It is then rejected. System is then developed using some various engineering paradigm.</p>
2	<p>The advantages of evolutionary prototyping are:</p> <p>Fast delivery of the working system.</p> <p>User is contained while developing the system.</p> <p>The more useful system can be delivered.</p> <p>Specification, design and implementation work in equivalent manner.</p>
